Work Report: 11 Oct and 12 Oct 2026

Smart Therapy and AI Digital Platform. 22 commits on main (2 on Sunday, 20 on Monday).

Sunday 11 Oct (2 commits)

- **Admin login:** admins now go straight to /admin after logging in.
- **Error pages:** added custom error and 404 pages for the whole app.

Monday 12 Oct (20 commits)

3D social stories (main focus)

- Added 3D social story sequencing (about 3,100 lines added).
- Built a 3D park scene for "Meeting Someone New".
- Added 3D worlds and cast characters for the other social stories.
- Polished animations and poses: toothbrush held level and brought to her mouth, spoon level while eating, eating hands, visible Zzz in bed, speech bubbles kept off her face, cereal bowl added.
- Added Babylon.js (core and loaders) to the frontend, preparing for the Babylon renderer.
- Moved the cast and pose data into a shared module.

WhatsApp and n8n integration (built, then reworked)

- **Morning:** WhatsApp send and therapist lookup APIs for n8n; n8n APIs for the morning brief and therapist commands; n8n notified when a session completes; x-api-key requirement removed from n8n routes.
- **Afternoon:** therapist registration now collects a phone number; admin overview includes phone number and first/last name for n8n.
- **Evening:** removed the WhatsApp bot and all sending, then restored the send/invite routes, clients and session notifications; sent the patient invite link via the n8n webhook; switched to the official WhatsApp Cloud API; removed n8n entirely.

Summary

Sunday was small: login routing and error pages. Monday split in two: the first half went to WhatsApp and n8n, ending with n8n removed and WhatsApp on the official Cloud API; the second half went to the 3D social stories, with new scenes, polish and Babylon.js groundwork.
